## Description

The device is an electronic data logger for wall installation, with integrated data remote transmission 4G/2G, for autonomous recording of different measurands and with Bluetooth 5.0 LE interface for a simple cable-free on-site operation per mobile App.

A high-efficiency power management allows dependent on supply and settings, the long-term application for more than 10 years, as well as a fast measuring operation mode with short-term data transmission.

The robust design and the high-quality workmanship turns the device into a very high quality product.

A captive laser marking of the type label ensures the identifiability throughout the entire lifetime of the device.

Obviously is the optional marking of a measurement point designation resp. TAG of course also per laser marking.

A customer specific configuration resp. preset is also optionally available.
