

fill level

Type:
Hydrocont® HP4SC

*Hydrostatic filling level transmitter
for general applications*

Technical information TI02.20

In brief

Piktogramme:

Application

- Water and waste water sector
- Machinery and plant engineering
- Air-conditioning and refrigeration plant engineering
- Hydraulic and pneumatic systems
- Process industry
- Environmental technology

Main features

- Measuring ranges from 100 mbar up to 10 bar
- Robust ceramic front-flush diaphragm
- Precise dry capacitive sensor
- Highest accuracy to $\leq 0,05\%$
- Integrated long-term stable temperature sensor
- Process temperature range -20°C to $+70^{\circ}\text{C}$
- Electronic RS485 Modbus®-RTU
- Integrated overvoltage protection

Description

The device is an electronic hydrostatic filling level transmitter for monitoring, control and continuous measurement of filling levels and temperatures.

Due to its high accuracy and the digital adjustability by RS485 Modbus®-RTU the device can be suited to a wide variety of applications.

The robust design and the high-quality workmanship turns the device into a very high quality product, which even the most adverse environmental conditions cannot affect, whether the lowest temperatures when used outdoors, extreme shock and vibration stress or aggressive media.

A captive laser marking of the type label ensures the identifiability throughout the entire lifetime of the device.

Obviously is the optional marking of a measurement point designation resp. TAG, a customer label or of a neutral type label, of course also per laser

marking.

A LABS- resp. silicone-free version, a factory calibration with calibration certificate and a customer specific configuration resp. preset is also optionally available like a material test certificate EN10204 3.1 or a factory certifications for drink water suitability. Customer specific special versions can be realized short-term on request, e.g. special designs or other process materials.
